

Door Installation Tool

WalzCraft's Door Installation Tool helps with the mounting of hinged cabinet doors to the cabinet face frame. The device creates a ledge upon which the installer can rest the door while fastening it to the face frame.

- The device fits into the lower corner of the face frame on the side the door is hinged on. A cross bar and thumb screw hold the device in position.
- With the door resting on the ledge created by the device, the distance from the bottom of the door to the bottom of the face frame remains consistent. The door is easily attached to the face frame with no further measuring.
- Please see our Website at WalzCraft.com for more information on the use of this tool.

#187272

Door Installation Tool**Drawer Front Installation Tool**

WalzCraft's Drawer Front Installation Tool firmly holds an installed drawer box in a slightly open position. The advantage is that during installation, the drawer front will not be contacting the face frame, only the front of the drawer box. This is a great aid when using double sided tape to temporarily position the drawer front.

- The device fits over a 3/4" thick face frame and is held in position with a screw tensioner.
- With the device in position, the drawer box is pushed closed, but comes in contact with the device and is therefore held open. The distance that the box is held open can be controlled with an adjustment screw. The drawer front can now be temporarily attached with double stick tape squares.
- Please see our Website at WalzCraft.com for more information on the use of this tool.

Seam Cutting Guide

WalzCraft's Seam Cutting Guide is an installation tool that allows a refacing installer to quickly and easily cut perfect seams at stile & rail joints when installing thin veneers and 3D Laminate material on the face of cabinets. It is a precision crafted aid that will give years of service to the refacing professional.

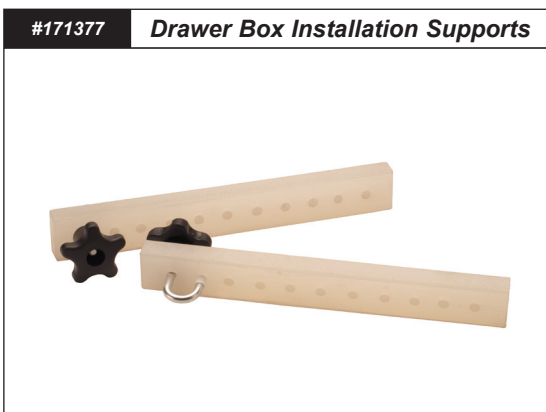

- WalzCraft's Seam Cutting Guide can be adjusted to fit onto the rail of a cabinet face frame. The vertical adjustment slot allows the guide to fit rail widths up to 4".
- Adjusting screws allow the guide to be set to precisely align the edge of the guide with the edge of the stile veneer.
- Once the edge of the guide is aligned with the edge of the stile veneer, a sharp utility knife uses the edge of the device as a guide to trim the rail veneer to length for a perfect fit.
- Please see our Website at WalzCraft.com for more information on the use of this tool.

Drawer Box Installation Supports

WalzCraft's Drawer Box Installation Supports allow an installer to easily find the correct location for mounting of the drawer slide rear brackets during the installation of a drawer box.

- The hook bolt clamps the alignment bar to the front of the drawer box.
- The alignment bar is then clamped to the cabinet face frame. This positions the front of the drawer box in the same plane as the face frame.
- Once in position, the rear brackets are accessed at the back of the cabinet and screwed to the cabinet back.
- Please see our Website at WalzCraft.com for more information on the use of this tool.

Veneer Smoothing Tool

WalzCraft's Veneer Smoothing Tool helps to achieve the proper amount of pressure when installing wood veneer or 3D Laminate material with Pressure Sensitive Adhesive (PSA) or Contact Cement.

- The blade on the Veneer Smoothing device is made of a material that minimizes scratching or marring of finished surfaces.
- Please see our Website at WalzCraft.com for more information on the use of this tool.

#171376

Veneer Smoothing Tool**Tri Trimmer Tool**

The Tri Trimmer helps cabinet refacers access and trim difficult spaces with ease. Whether you are using the paired blades for long stretches of exposed material, or using the single blade for hard-to-reach surfaces, the Tri Trimmer helps alleviate frustration while providing perfect, flush edges.

- It is great for refacing cabinets, trimming veneers and edgework, and trimming inner and outer face frames.
- This tool uses Carbon Steel 30 degree blades for clean cutting.
- The Tri Trimmer is ergonomically designed for a comfortable grip.
- Often used in conjunction with the **Ceramic Edge Trimmer** (See Next Page).
- Please see our Website at WalzCraft.com for more information on the use of this tool.
